Available immediately: Our extended Table Call Station with 112 keys for DS-6 systems

We're happy to announce that a digital IP table call station with 112 keys is now available for major self-sufficient DS-6 systems. This new station is an extension of the digital IP-DS-6 table call station with 64 keys and can be used as a master station in control centres for all intercom, telephone, alarm and public address connections.

The new call station consists of the following elements, which can be combined according to the modular principle:

- Basic Unit with 16 keys, delivery number: 1045 0
- Extension Unit 1 with 48 keys, delivery number: 1047 2
- Extension Unit 2 with 48 keys, delivery number: 1047 2

DS-6 Table Call Station with 112 keys

Party Line, the new function for intercom connections in DS-6 systems

A number of persons wish to communicate with each other in a conference call (intercom, half-duplex).

Everybody included in the conference can speak, however they can't all speak at the same time. Whenever one person speaks, all the others listen. Participants can be pre-selected. Any intercom station, regardless of whether it's digital or analogue, can be included.

To select participants, the MTSD DS-6 digital table call station or any PC call station with touch screen can be used.

To use the Party Line function of a MTSD-6, the following keys must be reserved:

1. Party Line key to define groups of participants
2. Keys for target call stations (Party Line participants)
3. Party Line key to include your own call station
4. Party Line Speak key (activated only when your own call station is included in the selection)
5. Party Line Cancel key

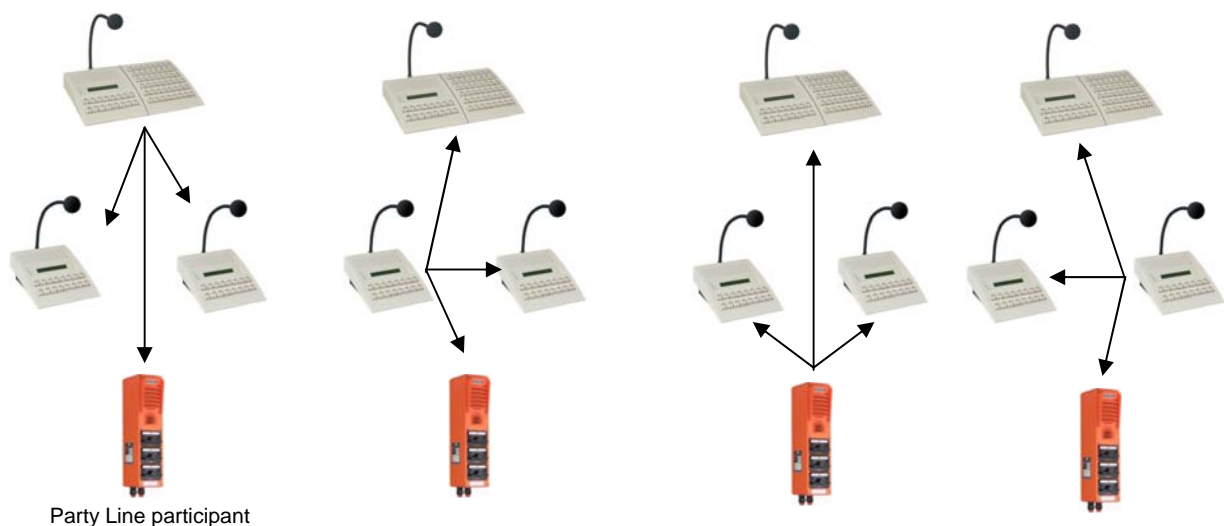

To select participants, press the Party Line key (reserved for defining groups of participants), *and keep it pressed* while at the same time selecting any target call station(s) by pressing the associated key(s).

To unselect participants, repeat this procedure.

Once the Party Line session is finished, all connections can be reset by using the Cancel key.

Information about our new products

We conduct information sessions at regular intervals.

Our next German-language information session is scheduled for March 17, 2009.

We would be happy to welcome you in our offices for this event.

A special invitation will be sent to you shortly.

We would also be pleased to conduct an information session in your company. If interested, please contact Mr. Ripholz under +49 (0)208 5995 294.

E-mail: bripholz@neumann-elektronik.com.

Our topics:

- **Corporate strategy**
- **Surplus value of IP system technology in standardized transmission networks**
- **IP-based intercom technology with decentralized systems and high voice bandwidth**
- **Retaining of analogue end devices**
- **Emergency calls and information using centralized IP systems**
- **A presentation of our new system technology.**
