railtec2007

At the railtec 2007 trade fair in Dortmund, Neumann Elektronik and AEG MIS presented themselves in a new partnership. Located right next to the trade fair stand of German Railway, we had an ideal position to establish plenty of railway-related customer contacts.

Using this platform, we were able to demonstrate the subtle interplay of two different systems manufactured by our two companies: a passenger information display system by AEG MIS in combination with a public address system manufactured by Neumann Elektronik.

Special highlights were:

- the new modular info column
- the new loudspeaker prototype for public address systems in railway stations and public transportation
- the new IP based push-to-talk technology
- the command and communication column for loading and unloading in container loading stations

Detailed information material can be obtained in training courses and special information sessions. Training courses for our products and solutions are scheduled for the following dates: 01.12.2007, 06.12.2007, 10.12.2007 and 17.12.2007.
